(a) variance and entanglement vs depth, $n = 12$
gradient variance / Haar value
entropy $S_{n/2}$ / Page value
ratio to the Haar / Page value
depth L
(b) entanglement of $U(\theta)|0\rangle$
Page value
$L = 2$
$L = 5$
$L = 10$
$L = 20$
$L = 50$
half-chain entropy $S_{n/2}$ (nats)
qubits n
